PARENTS GUIDE

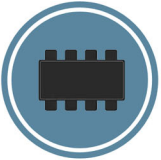

TO COMPUTER BASICS

CPU

(Central Processing Unit)

The CPU is the brains of the computer where most calculations take place. The better it is, the faster the computer thinks

RAM

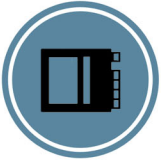

(Random Access Memory)

RAM is where the programs are stored while in use. The more RAM a computer has the more it can open at once without slowing down. 4GB is the minimum for students.

Battery

An ALL day battery life is important. 8hrs+ is needed to guarantee a full school day use on a single charge.

Storage

64GB of storage (eMMC or SSD) is the recommended minimum. Most work is cloud based and storage isn't as important on the device, but try to avoid mechanical Hard Drives as they are slower.

A balance of good hardware within your budget creates a great experience

Internet Security

Internet security covers more than viruses these days. Students are safe on the School's network, but vulnerable at home. We have security options specifically for students. It's important to note that free Virus Protection available on the internet does not update or protect your privacy. We recommend either Norton or Trend Security.

Protection

A good case gives your device the best chance, and keeps it looking good with all the use it will get. These devices will have a hard life at school, please protect them as best you can with a case or heavy duty carry bag.

Product Care

Having Product Care with Your purchase means you can enjoy a range of special benefits that are exclusive to you and will help you enjoy the experience of your new product even more. With Product Care you can relax knowing your purchase comes with additional protection. If an assessment finds that your product has suffered an eligible fault, we'll arrange a brand new replacement product, a store credit or cash settlement.

Lisa's into education.

Here for the learning journey.

From kindy to uni, learning can get expensive.

Especially when devices can't quite keep pace with the class. That's where Lisa can make school and study a little less stressful – from budgeting, to upgrading. Here's how:

Things happen at school

Crazy things can happen to leased goods – particularly when kids are involved. With Lisa's FlexiCare program, leased goods can usually be repaired or replaced for accidental loss, accidental damage or theft as part of your agreement. You could even get loaner goods for laptops, smartphones, tablets and digital cameras.

Freedom to move

What if you decide to change direction with your studies? Not a problem. There's a number of lease options that won't box you in – from applying for an upgrade and switching to new or different goods, to returning your goods and ending your agreement or continuing to lease with Double Time.

Continue to live life

Continue to live life: If you'd prefer to keep your cash in the bank, leasing can be an excellent choice – as it will spread out the cost of any new items with affordable monthly payments. Also, with Lisa, you won't pay any deposit or upfront fees.

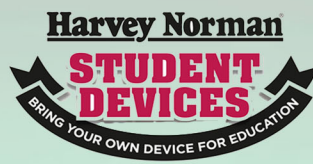

Let others dream

Don't like the thought of wastage? Neither do we. After your lease, Lisa repurposes and sells your old goods to schools and communities in need around the world.

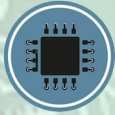

Relax with Lisa.

Free yourself up to enjoy the best things in life! No deposits and affordable monthly payments.

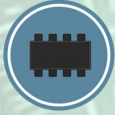

Available to approved applicants, applicant must be working and be over 18 years. Terms and conditions apply
Loaner products available (at no charge) if you're without your equipment
In the event goods are lost or damaged an admin charge is payable of \$110 per incident.

ACER ASPIRE A114

QC Celeron

4GB

6 Hours

64GB

Key Features

- Laptop is driven by a quad-core processor, giving it enough power for speedy execution of programs

We Also Recommend

Internet Security with Privacy Manager

Internet security covers more than viruses these days. Students are safe on the school network, but vulnerable at home. We have security options specifically for students. It's important to note that free Virus Protection available online does not update or protect your child's privacy online. We recommend either Norton or Trend Security.

Power Filtration

Your manufacturer's warranty does not cover you against power events that can damage your equipment. Unfortunately, the student needs to charge their device every evening, even if there are storms around; a power filter ensures the device gets the correct, clean power, prolonging its life and minimising down time. Devices start from \$79, and include lifetime warranties and connected equipment warranty so you only purchase them once and your equipment is covered.

Carry Case

Ask us about the best protection for your device. Even if you use the Educational Payment Plan, being without your equipment is frustrating. Damage prevention is important
